Comment Text :

1 -->[From what I have read, there are major concerns about the geologic suitability of  
Yucca Mountain to be a repository for nuclear waste. It is not water or air tight.]

2 Also[the potential for contamination along the routes to get the material to the site  
imposes an additional hazard on this project.]

Currently the materials are stored in ways that range from fairly safe to dangerous.  
Something clearly needs to be done to minimize the risk of this highly dangerous  
waste. The waste will be with us for hundreds of years. It would be a huge mistake  
to move it, and then store it in an unsafe way.

3 [We must end the production of this waste, by ending the production of nuclear weapons  
and our use of plutonium producing nuclear energy. Our scientific research efforts  
must be redoubled and more, to find a way to safely contain the waste we have.  
Storage at Yucca Mountain is not the answer.]
